About the Organization

Dominant approaches to digital technologies are steeped in ideologies of market fundamentalism, and have displaced the cornerstone ethics of participation, social justice, and gender equality.

At [IT for Change](#), we believe that progressive development sector actors must come together to influence the techno-social structures that are redefining our societies. We seek to build bridges across different sectors to strive towards a digital society that is equitable.

Our work, straddling [Data and Artificial Intelligence \(AI\)](#), [Big Tech and Digital Economy](#), [the Digital Public Sphere](#), [Feminist Digitality](#), [Education and Technology](#), and more, pushes the boundaries of theory and practice to explore new horizons for development justice.

MISSION

Democratizing the control and use of digital technologies so that individuals and communities are able to use them freely towards their empowerment

VISION

A society in which digital technologies contribute to social justice and equality

VALUES

Equity, Social Justice, Gender Equality, and Democracy

STRATEGIES

- Partnering with local communities
- Forging local and global networks
- Undertaking research
- Engaging with policy spaces
- Creating new institutional capacity

A Note from the Team

As a yearly ritual and a critical organizational public function, the development and publication of the annual report is always a time of reflection here at [IT for Change](#).

It provides the necessary room to step back and take stock of our journey so far, to assess the progress we have made during another year at the front-lines of digital justice, and importantly, to evaluate and confront with bare honesty all that remains to be done. While Covid-19 is a continuous presence in the backdrop, the world has cautiously emerged from the chokehold of the pandemic. From weathering the second and third waves of the virus to returning to on-site work, in-person events, field work, and even global travel and networking, the year has been challenging and hopeful for the world at large, and the IT for Change team in many ways.

We have continued to further the digital justice agenda at global and local levels, throwing ourselves into an ever-growing roster of research projects and initiatives, engaging with emerging focus areas, and forging new partnerships, while strengthening old ones. We continue to grow our impact in the developmental sector by influencing techno-social changes and policymaking in our thematic areas of work, moving towards supporting inclusive, egalitarian, and just policy frameworks — from the grassroots to the highest echelons of international rule-making. An uncompromising standpoint, based on intersectional feminist values and substantive equality, has always informed this tapestry of work.

This year, we have been part of key flashpoint victories, campaigns that we led or threw our weight behind. We have also seen the rewards of years of work galvanize into global agendas, gaining wider traction. Across these endeavors, we recognize that our work strengthens and is strengthened by the energies of a larger set of actors, feeding into instances of impact.

We capture in our annual report for the year 2021-22, the high notes of these efforts. We have distilled innumerable hours of knowledge production, field work, community engagement, and local-to-global advocacy undertaken by the 50+ members of the IT for Change team into a short reflective narrative. Whether you are an old friend of the organization, or a new partner, we invite you to engage with our report and get to know us and our work better.

We commit to continue our efforts — with an eye on the future — building our internal capacity to further our vision and strong legacy. Some of the main planks of our work in the coming year include continuing the important fight against Big Tech, co-shaping a global movement to democratize global digital cooperation, incubating a viable communitarian use case for AI in education, developing legal-institutional responses to gendered hate speech, and reclaiming labor rights in the digital paradigm.

In Solidarity,
The IT for Change Team

Our Impact

1 At the Forefront of the Battle against the Transnational Digital Corporation

As the pandemic laid bare the excesses of digital capitalism and the attendant regulatory deficits that entrench the status quo, a notable discursive shift has occurred in the public consciousness. The consensus is that *Big Tech simply can't be allowed to get away any longer*. In this regard, a growing wave of regulation that seeks to make corporations more accountable is only a welcome first step. What is missing from this conversation, and indeed, rendered invisible, is the ever-increasing influence of the private sector in rule-making in the digital space. This has the disastrous consequence of eroding public interest and undercutting economic justice.

The need of the hour is to take on the question of what kind of governance can set right this hollowing out of publicness. This is why our research and advocacy focus on driving a stake through the heart of unchecked market power by unraveling the assetization of data — a priceless social resource of our time. We have gone on to bat for distributive justice in the digital economy, calling out the reversal of labor gains and the need for updated standards for decent work.

This year, we worked to stop a Big Tech takeover in its tracks. Twice

We pushed back against the privatization of India's digital finance backbone through a campaign with the State Bank of India's employees' union, and UNI Global, a global union federation for the skills and services sectors, against the proposal of the Reserve Bank of India (RBI) to create New Umbrella Entities (NUEs). This plan would have allowed private entities to create parallel and for-profit digital payment platforms, to the detriment of the existing public payment standard. Following our letter and widespread media coverage in August 2021, the RBI put its plan on hold. [Read our campaign letter, covered by nine media outlets.](#)

We prevented Meta from gaining backdoor access to WhatsApp user data by joining the efforts of [a global civil society campaign](#) against WhatsApp's proposed policy in April 2021. The move would have given Meta, as the parent company, unparalleled control over the user data of millions who use WhatsApp, especially in the Global South. Facing pressure from policymakers, civil society, and users at large, Meta rolled back this decision.

We took the fight against multistakeholderism to Davos and beyond

Through the [Just Net Coalition \(JNC\)](#) and the [People's Working Group on Multistakeholderism \(PWGM\)](#), we made several efforts to challenge the brazen hold of Big Tech over global digital governance, all in the name of stakeholderism, a devious ploy to dislodge democratic modalities of rule-making. To counter the glib narratives of the World Economic Forum (WEF) on industry 4.0, we also analyzed Big Tech's takeover of digital governance in a [book published by the PWGM](#) and released in January 2022 at an event attended by Jeremy Corbyn.

[View this powerful video statement](#) (at 00:52 mins) made by us at the UN General Assembly's third thematic consultation on the 'Our Common Agenda' report.

Our consistent call for platform accountability on online sexism and misogyny is gathering global momentum

Our [joint submission](#) with [InternetLab](#) was the only civil society submission cited by the UN Special Rapporteur (SR) on the Right to Freedom of Speech and Expression in [her July 2021 report](#) to point to the failure of social media behemoths to address online misogyny and cultures of gender-based violence with “the urgency, seriousness and resources it requires”.

[We co-organized a panel](#) with the UN SR’s office at the Internet Governance Forum (IGF), December 2021, bringing to the table representatives from the Government of Mexico, the Council of Europe, and the public policy wing of Meta, for a dialogue on the duty of care vested in platform companies to tackle sexist hate.

We have been one of the few civil society organizations straddling engagement with private platform companies (in particular, Meta) for a techno-design overhaul and advocacy in key UN forums — consultations of the Office of the United Nations High Commissioner for Human Rights (OHCHR) on Big Tech’s human rights obligations and Generation Equality Action Coalitions of UN Women.

Using the tools of quantitative and qualitative research about women’s online participation, [we have built a formidable body of evidence](#) that informs our unequivocal demand for a binding multilateral framework as a basis to regulate social media and revitalize digital democracy and the feminist public sphere.

And...we're sharpening the critique on Big Tech issues with a clear agenda to decolonize the digital

A first-of-its-kind media initiative from IT for Change, we launched [our monthly newsletter, DataSyn](#), dedicated to providing concise and relevant analysis on Big Tech issues. We went live in October 2021, with [a debut issue](#) that looked into the Chinese response to Big Tech control, and haven't looked back since. Over the months, we have covered a host of issues including Big Tech's growing hold over internet infrastructure, fintech, food systems and digitalization, and labor in the digital economy. Our [year-end issue](#) featuring 21 key voices reflecting on the struggles against Big Tech in 2021 is a feat that we are particularly proud of. DataSyn's readership spans academics, policy professionals, and activists. We have been able to instrumentalize the essays from DataSyn toward various advocacy initiatives.

FYI:

The piece ['Assetization of Social Life'](#) by scholar Kean Birch, commissioned as part of efforts around the WEF annual forum in January 2022, has been our most-read DataSyn piece to date.

2

Shaping Public Digitalization Pathways for the South

An extractive digital economy has created a gaping data-divide among countries, manifesting and deepening global inequality. With our institutions and systems steadily getting datafied, public infrastructure and services like education and health are rapidly becoming integrated with transnational digital value chains. It is more important than ever before for people and nations of the Global South to reclaim their data and digital infrastructure. This calls for checking geoeconomic and geopolitical power in the digital space, and relocalizing the gains of the digital in a sustainable and equitable manner. The de facto control of the technology corporation over people's destinies must make way for bold public policy models.

Our collective future hinges on an expanded ideal of human rights — one that places human agency and collective democratic will in relation to the digital condition. This year we have made important strides in building the alternative narrative to the mainstream; collaborating with civil society actors, researchers, and trade union activists; and contributing to public policy processes. From working to preserve policy space and data sovereignty in digital trade agreements, furthering workers' rights over the data they produce, to promoting conceptual frameworks on the data commons, and equipping governments from the Global South in their policy development on data and AI, we have used various routes to shape a new institutional vision of digitality.

We enshrined ‘community data’ as a concept in discourse, policy, and practice

We have been successful in seeding the idea of community data, where data rights are vested in communities, as well as a [data semi commons approach](#) that deters free riding by Big Tech, in academic discourse and policy debate. Through our research, as well as at various [national](#) and [global forums](#), we have evangelized thinking around this with academics and researchers. Through involvement in Government of India committees, we have been able to push for its inclusion in the Indian draft law framework on non-personal data.

We have also embarked on models that can demonstrate ideas for alternative data and community-led models in practice. With one state government in India, we are exploring alternative public-supported platform models. We have been working with [SEWA Cooperative Federation](#) and other organizations to assess how public policy frameworks can be developed through platform cooperativism and alternative platform economy employment models, based on worker collectives.

In January 2022, we also entered into an exciting partnership with the Department of Education, Government of Kerala. We are building a community AI model for learning to deploy alternative techno-design built on decentralization of data architectures and federated decision-making to ensure [local-level control over the generation of data-based intelligence](#) and its deployment in decision-making.

We furthered the digital industrialization agenda for the Global South

Our longstanding contributions to the UN Conference on Trade and Development (UNCTAD) and the South Centre have been crucial in putting the agenda of digital sovereignty front and center in global policy discussions. At the 15th quadrennial session, the [Ministerial Declaration](#) of G-77 group of developing countries invoked the idea of 'digital industrialization', [a concept we have pioneered](#). Another key agenda-setting opportunity has emerged through [our participation](#) in the UN Secretary General's 10-member expert group on technology facilitation. We worked to ensure that the notion of 'global digital public goods' received its due in the UN Science, Technology and Innovation (STI) Forum in May 2022.

[Read our policy briefs](#) prepared for this forum, expected to form a part of the official background report to the UN STI Forum.

We provided the compass for economic justice in AI governance dialogues.

In August 2021, the Paris Peace Forum, an initiative of the French government, invited us to join a working group with leading academics, technologists, civil society members, and activists from across the world to develop a roadmap to bridge North-South concerns in AI governance. As part of the writing committee, we drafted a working paper, catalyzing a rich debate and building consensus around the need for a new AI governance approach to tackle not only the issues of AI bias and discrimination, but also the skewed distribution of data and AI resources in the global economy. Engage with the [report's key findings](#).

We mainstreamed the idea of workers' economic claims over their data

We have consistently argued that workers' data rights must be seen to include not only freedom from dataveillance and exploitative forms of algorithmic management, but also their claims over the data value they generate in the laboring process. Once a fringe concept, this idea of [the economic value of workers' data](#), and indeed, the right of workers to the same, is now increasingly gaining wider acceptance. We are proud to have worked with major union federations, including the International Trade Union Confederation (ITUC) and Public Services International (PSI) in this regard, and happy to report that the International Labour Organization (ILO) governing body in 2021 recognized the concept of workers' data rights, and has tabled the issue to be discussed in the 2022 International Labour Conference.

We co-created a data justice agenda for labor

We mobilized different constituencies committed to labor issues in the digital economy to come together on a pan-Indian civil society (CS) platform, paving the way for a coordinated civil society response to India's evolving policy context.

[Read our issue brief](#) that analyzed the impact of the pandemic and associated lockdowns on platform workers in India.

[Check out 'A Civil Society Agenda for E-Shram'](#), which outlines a broad set of recommendations to strengthen the design and implementation of the online social security system for workers.

We continued to fiercely advocate for public safeguards to people's data

Our vigilance around emerging data policies in India has ensured that a discourse on the need to protect people's data from corporate capture has steadily gained ground. When the Government of Karnataka announced its deeply flawed Draft Open Data Policy framework without public consultation, we swung into action and raised a range of concerns around the policy. Our timely [intervention in the press](#) was instrumental in forcing the state government to revisit its policy, with the Additional Secretary for e-Governance coming out with a public statement to allay concerns about Big Tech capture of public datasets. [Read our op-ed](#) in the Deccan Herald.

We are making inroads into tech-design policies of national data infrastructure

We are working closely with the developers of the new digital information system for the National Rural Livelihood Mission (NRLM) and its women-led Self-Help Groups (SHGs).

Our recommendations argue for more than just design activism, underscoring the role of policy and institutional choices. We are pleased that the National Mission Management Unit (NMMU) has taken cognizance of our inputs and concurs with us on the need for a data governance policy that recognizes the rights of the SHGs to co-determine decisions on their data.

3 An Important Bridge between Digital Justice and Development Justice

The political economy of development in the 21st century is predicated on the trajectory of digitalization — the manner in which institutions can evolve to meet the imperatives for an equitable and just digital paradigm. Big Tech and its mutations in the form of Big Agri, Big Pharma, and Big Retail divest people of their control over material and knowledge resources, undercutting local economic autonomy and shrinking the policy space for developing countries to reimagine the digital society and economy. Indeed, there can be no development justice without digital justice. Well aware of this connection, social movements and global civil society at the forefront of various struggles have begun expanding their repertoire to incorporate the digital sub-text

in their critiques and strategies. We are humbled that many organizations making this shift have turned to us with the faith that we can bring synergies by making the relevant data and digital connections to the work they do. These partnerships have matured into working groups, activist teach-ins, practitioner institutes, and programming roadmaps focusing on priority actions for a fair, just, and equitable global digital order.

We have also had the opportunity to advise and input into the organizational thinking, agenda, and programming priorities of philanthropic foundations, as well as academic networks of the North working in solidarity with the South.

We worked with global civil society to connect the development and digital justice dots

Forging strong partnerships with global organizations and social movements in health, food sovereignty, biodiversity, education, global trade, and finance, we have challenged the neo-colonial logics of data extractivism in international policy debates, bridging digital rights activism with development justice advocacy.

- The [health data governance principles](#) that we developed with Transform Health, a global initiative that works to further the universal health goal of the Sustainable Development Goals (SDGs), are a pathbreaking contribution to the data governance debates at the World Health Organization (WHO).
- Our work with the ETC group has deepened the conversations on food, data, and justice, pushing against the takeover of agriculture value chains by large transnational corporations, and arguing for a people-led digitalization.
- Collaborating with the Third World Network has given us the opportunity to provide [strategic inputs](#) on how Digital Sequence Information (DSI) flows need to be governed in the public interest, in the age of synthetic biology. The DSI question is a cross-cutting issue of pertinence to global governance fora such as the Biodiversity Convention, the WHO's work on genomic sequencing, the Food and Agriculture Organization's (FAO) mandate on the Seed Treaty, and more.
- We have been chosen by Oxfam [to lead a critical study](#) on mapping investments by the International Finance Corporation, a sister organization of the World Bank, in India's burgeoning ed-tech sector, a study that we hope will pave the way for a sustained campaign in India.
- We continued to work closely with the Our World is Not for Sale (OWINFS) network, co-leading the civil society offensive to expose the machinations of the big powers on the [e-commerce agenda](#), in the lead-up to the World Trade Organization (WTO) Ministerial Conference-12. Data governance issues — we have held — are not to be conflated with trade rules.
- Linking up with the Civil Society Mechanism on Financing for Development at the Friends of Monterrey retreat and UN Financing for Development process has been a vital step to open the conversation on financing of digital infrastructures.

We convened the first global network on feminist digital justice

In partnership with [DAWN](#), a leading Southern feminist organization, we initiated a global working group inviting 20+ leading feminist scholars and practitioners from Asia, Africa, and Latin America to evolve a feminist vision for the digital economy. Weaving together issues of misrecognition and maldistribution rampant in data capitalism, our platform has made a unique contribution to feminist analysis. Through 15+ discussions in 2021-22, the group has evolved an issue paper and a set of principles on feminist digital justice that will feed into a campaign for feminist digital innovation at the Commission on the Status of Women-2023 (CSW), where digital technologies are part of the priority theme.

Also, see our efforts with Friedrich Ebert Stiftung (FES) on Feminist Digital Justice, and the wonderful publication — [‘The Deal We Always Wanted’](#) — that came out of our dialogues on global feminism.

We are at the cutting-edge of naming how digitality is changing work and workers' rights

It would be no exaggeration to say that our theoretical and policy efforts have visibilized the need to account for algorithmic control as a new form of exploitation, and the idea of [workers' data rights as a vital agenda](#), in digitalized workplaces. Our credibility in the space has been affirmed through various key partnerships, including with leading institutions like the ILO and philanthropic foundations like the Ford Foundation. To inform the directions of philanthropic effort on just futures of work, we successfully convened a series of dialogues with over 80 scholars, practitioners, unions, multilateral agencies, government representatives, and digital rights activists from across the world.

OUR PARTNERSHIP IMPACT FOOTPRINT

Worked with **100+** CSO and think tanks

Spanning **20** countries

Collaborated with **10+** education institutes

Supported **5** union federations

Supported by **10** funding agencies

Consulted by **15+** government bodies

Anchoring **15+** key networks

4

Forging New Models for Digital Citizenship

Connectivity does not automatically lead to meaningful inclusion in economic, social, and political life. The barriers to participation in the digital economy and society are socio-structural, arising as they do in historical power structures.

Our field programs have undertaken the difficult work to address this through sustained interventions with the public education system, local government institutions, and marginalized communities.

We have co-constructed context-appropriate models of education and digital literacy that harness the emancipatory potential of digital technologies for the empowerment and participation of those rendered voiceless by the powers that be, also working with grassroots and public institutions to build capabilities for adaptation and transformation.

Our commitment to community and institutional capacity-building has only deepened through these years of the pandemic .

We addressed the education emergency head-on

The pandemic-triggered school closures in India have led to an alarming education deprivation, and loss in foundational abilities in languages and mathematics among school-going children, particularly those from low-income households. In 2021-22, our Centre for Education and Technology stepped up efforts to address this crisis. We facilitated the launch of the [National Coalition on the Education Emergency \(NCEE\)](#), bringing together educationists and civil society groups from eight states in the country to build social pressure on policymakers to reopen public schools on a priority basis.

Through research briefs, media op-eds, a [“Back to School” campaign](#), and community engagement, the Coalition kept alive the ‘education emergency’ issue in public discourse.

In Karnataka, our efforts succeeded in persuading the government to advance the date for school reopening, and we also supported the Department of State Educational Research and Training to evolve appropriate guidelines for safe reopening of schools.

We convened 10 ‘Back to School’ camps with students from socio-economically marginalized communities to address the learning loss caused by prolonged school closures. Our efforts helped 750+ students, who had missed school for months, to return to structured learning, and 25 batches of teachers to navigate challenges of online teaching through [open courses](#).

Our Prakriye Centre continues to be an enabler of rural women's access to entitlements and services

The pandemic years have seen acute distress in rural India, with disruption of public institutional services that have hit poor women the hardest. This year, through 37 gender helpdesks at the community-level, our team of trained para-counsellors provided support services to over 600 women survivors of domestic violence.

Our [information centers](#) helped process over 1,000+ welfare entitlement applications, also reaching 1,500 women members of Self Help Groups through media-supported learning forums. Women infomediaries of two centers rose to the occasion, collectivizing community members and mobilizing the local government to convene Pension Adalats (adjudicatory processes to respond to people's pension-related grievances). Over 100 pension applications from 61 villages were successfully filed through this effort.

PRAKRIYE IMPACT AT A GLANCE

1000+	welfare entitlement apps processed
1500	women members of SHGs reached
600	survivors of DV supported
100	pension applications filed
37	gender helpdesks set up
61	villages reached

Our Hosa Hejje, Hosa Dishe (New Steps, New Directions) team filled a critical gap – reaching out to over 600 girls in Bengaluru city through FM radio

During the pandemic-related school closures, we initiated a 30-minute FM radio program, 'Nan Voice Nan Choice' (My Voice, My Choice), to continue our work with adolescent girls, supporting their empowerment journeys on a virtual platform. Since our in-school girls' clubs were not possible to organize in this period, the radio program was a timely innovation, using a range of innovative formats – expert interviews with feminist counsellors, teachers, activists, and mental health professionals; a fictionalized mini-serial on adolescent girls' challenges for self-actualization; and inspirational stories of girls who broke barriers – in order to communicate and reinforce a feminist narrative about adolescence. Girls from marginalized social backgrounds enthusiastically participated in the brainstorming and content development. Over 600 girls were reached through this program and the audio bank of content will be taken to schools across the state in the coming year. Give the program a [listen](#).

Nan Voice Nan Choice was one of my favorite programs during the Covid-19 pandemic. It was educational, entertaining, and motivating for not just adolescent girls, but all listeners in general. Each episode delivered a strong message, and the program espoused values such as cooperation, mutual respect, overcoming prejudiced mindsets.

– Dr. Umashree, one of our regular viewers, was all praise for the program, terming it as a “morale booster during the pandemic.”

Thematic Highlights

The Future of Work and Workers' Rights

The impact of digital technologies in the labor market and the shifting nature of work in the platform paradigm has emerged as the central peg of focus for our research and advocacy. This year, we have built on the solid foundation of past work, to continue tracking the evolution of this dynamic in multiple ways.

- Read [‘How Digitally Restructured Value Chains are Reshaping Labor Futures for Women in the Global South’](#) by Karishma Banga and Becky Faith
- Read [‘Social Relations under Surveillance Capitalism: Is Solidarity Still Possible?’](#) by Bama Athreya
- Read [‘Worker-Led Alternatives: A Line of Hope for New Platform Futures’](#) where Satyavrat Krishnakumar and Amay Korjan take stock of the platform cooperative movement

KEY MILESTONES

- **Field-building through research.** Our team worked on a number of research initiatives tracking this space. Of particular note is our report for the ILO, [‘Platform Labour in Search of Value’](#), which was released this year. This report, based on primary research and interviews, captures the new strategies being deployed by workers in the digital economy to reclaim their right to decent work and harness the affordances of the platform economy for worker-led enterprises.
- **Shaping discourse through popular writing.** We also brought out a number of [incisive think-pieces and essays](#) around labor issues for our [alternative media platform, Bot Populi](#), as well as for [DataSyn, our monthly newsletter](#).
- **Supporting union trainings.** We supported trade union capacity-building on key aspects of the digital economy and associated legislation in India and the rest of the world to equip members with information and knowledge resources to navigate the new terrain.

WHAT'S ON THE HORIZON?

- **A podcast series on worker data rights** that will unpack the new meanings of labor rights in the digitalizing context
- **A May Day series for DataSyn** with key labor voices from around the world
- **A global strategy event** convened in collaboration with international union federations

Digital Trade and E-commerce

As trade becomes the determining factor that shapes the digital economy, our work has focused on the implications of emerging digital trade deals for the right to development. We have joined trade activists to denounce stances espoused by the big powers — cross-border data flows without any controls, restrictions on regulation of transnational digital companies, and intensification of IP rights in digital service value chains — conditions that will only end up reinforcing Big Tech's power.

→ Read [‘Building Back Better with E-commerce: A Feminist Roadmap’](#)

KEY MILESTONES

- **Furthering our engagement with UNCTAD.** At the fifteenth session of the crucial UNCTAD Conference in October 2021, [our statements](#) underscored the urgent imperative to put distributive justice at the center in data value chains. We were also invited to be expert reviewers for the [‘UNCTAD Digital Economy 2021 Report’](#) exploring cross-border data flows and their future governance.
- **Striving for gender justice in trade.** We continued to counter the neoliberal opportunity rhetoric in policy dialogues on gender, trade, and development, highlighting the real concerns on equity and inclusion in the digital economy. To construct a positive agenda, we wrote a briefing paper on a feminist roadmap for e-commerce, also presenting insights at the WTO Public Forum, 2021. We also took part in [learning webinars](#) organized by the Gender and Trade Coalition to reflect on digital trade and sustainability.

WHAT'S ON THE HORIZON?

- **Engagement with policymakers from developing countries** to equip them to challenge hegemonic digital trade discourses of the Global North and resist capitulation at the WTO Ministerial Conference-12
- **Strategic advice to civil society groups** engaging with the G-20 Digital Economy Agenda and the Indo-Pacific Economic Framework for e-commerce
- **Ongoing tracking of digital trade developments** and civil society capacity-building on the data economy and its intersections with trade mandates
- **A new line of research** on exploring the terms of integration of women's micro, small and medium enterprises (MSMEs) in the global digital marketplace

Dismantling Big Tech

This year, we expanded our work on Big Tech, exploring through writing, research, and advocacy the policy directions necessary to rein in the monopolistic tendencies in the platform economy, and reclaim the potential of data for equitable development.

KEY MILESTONES

- **Launching the 'State of Big Tech' report.** To build strategies to respond to the aggrandizement of Big Tech power, we launched a flagship report inviting contributions from scholar-practitioners. Our volume, slated for release in the second half of 2022, moves past the critique of data capital to identify new horizons for resistance in popular mobilization, discursive alternatives, multilateral and national-level advocacy, alternative techno-governance strategies, and more.
- **Engaging with platform regulation.** We engaged with important regulatory developments coming out of India and the European Union (EU) with respect to the digital economy and data governance. We made a [submission to the European Commission \(EC\)](#) on the Draft Digital Markets Act, emphasizing the need to move away from an individualistic model of governance in favor of a community approach for rights holders, the necessity for wider data sharing, as well as structural separation across platform layers.
- **Confronting the ed-tech leviathan.** Through our research, we have been pushing back against the privatized takeover of education through digitalization. [Our article for the Economic and Political Weekly](#) examined the implications of Google and BYJU'S partnership on education services, and what this implies for the social role of education.

WHAT'S ON THE HORIZON?

- **Bringing together a cohort** of Big Tech-and-Society media fellows for DataSyn
- **Convening a campaign on ed-tech** with national and global civil society
- **Engaging with Global Digital Compact process** and due diligence regulation for corporations

Data and AI Infrastructures

The architecture of the digital is often coopted into the private, where narratives of efficiency and seamless convenience are offered upfront, while concerns of privacy and data extraction are pushed to the background. Our work has advocated using data and its associated ecosystem as a knowledge commons through a measured approach that deters flagrant exploitation by the private sector, especially deep-pocketed Big Tech companies.

→ Read our op-ed in The Hindu, entitled [‘Forging a Social Contract for Data’](#), which asks for a social commons for data, and outlines the responsibilities of the state in creation of public goods.

KEY MILESTONES

- **Incubating the Intelligent Infrastructures series.** To track developments on digital infrastructures and shape the policy and techno-design ecosystem around it, we launched the Intelligent Infrastructures series. Two papers, on the [Data Empowerment and Protection Architecture \(DEPA\)](#) and on [financial technologies](#) have been authored as part of the series.
- **Forwarding a framework for a semi-commons approach to data governance.** As part of the Data Governance Network series of working papers, we outlined a [conceptual framework for data governance](#) to enable the social and public value of data to be unlocked.

WHAT'S ON THE HORIZON?

- **Convening working group meetings** under the Right Digitalization umbrella, for a positive plan of action for digitalization in India
- **Advocating for a multilateral framework** for data and AI governance

Gender Justice in the Digital Paradigm

Our research and advocacy is focused on constantly interrogating new forms of erosion of the public and the commodification of the private in the digital paradigm and the implications for gender justice. We have continued to strive for a new political grammar of feminist digital justice, building on Southern feminist traditions.

→ On Dignified Menstruation Day, we released [our research analyzing the global menstruapps market](#) from a feminist political economy lens.

KEY MILESTONES

- **Evolving a feminist vision for social media governance.** We undertook [a pathbreaking India-based study](#) of the typologies of sexism and misogyny on Twitter in India. The research shows how algorithmic amplification on platforms contributes to 'pile-on' hate, rendering traditional threshold tests for hate speech completely inadequate. Regulation must, therefore, address gender-based hate as a structural problem of corporate tech design.
- **Campaign to bring the violence of data extractivism into focus.** For the 16 Days of Activism, an annual international feminist campaign on elimination of gender-based violence, we [organized](#) a Twitter chat with Breakthrough India demanding accountability of big social media platforms for gender-based cyberviolence. The campaign gained over 1,000 impressions per tweet on Twitter.
- **Convening feminist dialogues on digital economy and society.** In September 2021, we organized a roundtable on Platform Planet: A Feminist Digital Justice Exploration, bringing together 18 feminist scholars-activists and researchers. The cutting-edge debates at the workshop culminated in [a special issue for our digital magazine, Bot Populi](#) that racked up over 1,700 reads.
- **Developing proof of concept models for alternative platform enterprises.** In collaboration with LabourNet, Vrutti, and SEWA Cooperative Federation, we are excited to be rolling out an action research on worker-centric platform services.

WHAT'S ON THE HORIZON?

- **Organizing a virtual global conference** centered on feminist visions of social media governance
- **Producing a resource guide for the judiciary and lawyers** in India on rights-based redress to victims of gender-based cyberviolence
- **Undertaking research on the Indian judiciary's response** to online gender-based violence
- **Engaging with global and national policy debates** on digital and data innovation — a theme aligned to the upcoming CSW in 2023

Prakriye Field Center for Community Informatics and Development

Since 2005, our Prakriye field center has been engaged in leveraging new digital technologies for socio-political empowerment of women and adolescent girls from marginalized communities in three sub-districts of rural Mysuru. Two strategies are at the heart of the Prakriye center's efforts: a network of seven community information centers that are the nodes of a women-centered information and knowledge ecosystem at the grassroots; and a para-counselling service comprising 37 gender help desks providing a first port of call for emergency responses to domestic violence.

KEY MILESTONES

- **Providing redress for gender-based violence.** Our gender help desks provided first point of support to over 700 women and girls facing various forms of gender-based violence across our operational area. The service was a vital lifeline during the pandemic when lockdowns had led to an intensification of violence within households.
- **Deploying digital pedagogies for empowerment education.** Our digital media pedagogies using video and audio stories, integrated voice response (IVR) messaging, and participatory production of video stories, were able to support 900 women, 644 men, 659 women, and 90 adolescent girls in acquiring critical perspectives on gender cultural norms, and women's rights to full citizenship.
- **Enabling entitlements access through community information centers.** Our information centers, operated by young women infomediaries from local communities and supported by 19 community mobilizers, reached out to over 10,000 members of local communities connecting women and men from the margins to vital social security schemes and livelihood programs.

WHAT'S ON THE HORIZON?

- **Internal impact evaluation of our work** for strategic consolidation in the post-pandemic context
- **Creating village-level support groups of women and girls** to take up local civic-public issues and provide peer solidarity in times of crisis
- **Grassroots dialogues between community and local public institutions** for strengthening entitlements access and the service delivery ecosystem, with particular attention to new challenges in digital welfare systems

Education and Technology

The long shadow of the pandemic continues to expose and accentuate the stratification in the Indian school system, while giving impetus to an unchecked, unaccountable digitalization in education that robs the sector of its public nature. Our work continues to respond to these challenges.

→ This year, we pioneered a new course on 'Teaching Thinking through Concept Mapping' for student-teachers, which focused on strengthening their analytical, synthesical, creative, and critical thinking skills.

KEY MILESTONES

- **Working with educators on integrating technology in learning.** Our ongoing teacher-development programs, including workshops, on-site, and online courses have benefited more than 2,300 in-service and pre-service teachers in several states across India. Our focus is on supporting teachers to engage with critical perspectives on technology in education, in addition to teaching them to integrate digital tools and methods in their practice.
- **Strengthening institutional perspectives on community participation in education.** We contributed to a position paper on community participation in school education as part of a Government of Karnataka committee on implementation of the National Education Policy (NEP) 2020. We stressed on the emancipatory possibilities of digital technologies in collectivizing parents and community members, as well as in opening the information about their schools, available in the education system, to their scrutiny, for greater transparency and accountability.
- **Shaping discourse on digitalization in education.** We deepened discussions around crucial issues such as AI in education, safe reopening of schools, mapping education during Covid-19, and more at conferences and panel discussions hosted by major educational stakeholders and organizations, such as the Comparative Education Society of India, Right to Education Forum (RTEF), and as a part of the National Coalition on the Education Emergency. We also took these discussions to digital rights forums such as Rightscon.

WHAT'S ON THE HORIZON?

- **Expanding our work on adolescent girl empowerment** through the second phase of the “Hosa Hejje Hosa Dishe” program, forming 'Kishori clubs' (for adolescent girls) in around 300 schools in 5 districts of Karnataka, where a key focus will be reducing the girl drop-out rate in education, and preventing early marriages
- **Collaborative work with state government agencies in Karnataka, Tamil Nadu and Kerala,** and teacher education institutions in Karnataka, on technology in school and teacher education
- **Partnering with the Government of Kerala** for building a public AI model in education founded on values of teacher agency, community accountability and critical pedagogy. Expanding work with the NCEE on equity and inclusion in digitally-integrated education

Planet, People, and Well-being

This year, we worked with a committed focus to track and shape emerging debates on digitalization in health, food systems, and agriculture, advocating for community-centered data rights in these sectors. We have also underscored equitable distribution of data value as a key governance consideration in sectoral policies.

KEY MILESTONES

- **Policy advocacy for democratized data infrastructures in health.** We [engaged with policy consultations](#) announced by the National Health Authority (NHA) in India on the Ayushman Bharat Digital Mission (ABDM). We recommended [strong data use limitations](#) to safeguard public health datasets from corporate appropriation.
- **Working towards farmer-centric data models in agriculture.** We also [responded to the public consultation](#) announced by the Indian Ministry of Agriculture & Farmers Welfare on their white paper for the India Digital Ecosystem of Agriculture (IDEA). We made a clear pitch for farmer centricity in policymaking, prevention of corporate capture of core digital agriculture ecosystems, and decentralization and federation of farmers' community data.

WHAT'S ON THE HORIZON?

- **Forging a civil society platform** in India focused on farmer-centric digitalization in agriculture, under a Right Digitalization umbrella initiative
- **Deepening our local-to-global advocacy** on food systems, agro-ecology, and data justice in partnership with traditional groups working on these issues

The IT for Change Social Report

Reflecting on our Organizational Growth

At 20 years and counting, we are fully seized of the imperative to avoid complacency and inculcate system-wide values that promote self-reflection and agile action. We are conscious that the pandemic has made our mission to promote a technological paradigm towards the highest standards of democracy, social equity, and human well-being ever more urgent.

To respond to this need, we have begun in earnest to build pan-organizational readiness, re-examining and tweaking our programing priorities as well as organizational practices. While we know that the equilibrium between internal maturity and external demands is always a work-in-progress, we are confident that we are on the right path.

Expanding organizational talent

- We strengthened senior leadership in our technology, finance and accounting, and human resource and administration teams, and expanded staffing in these teams to meet the demands of our expanded project roster and large projects in particular
- We expanded our communications team to build our strategic outreach and network support capacities
- We continued to grow our team across various roles and expertise, with 24 new team members joining us in the year. We are now a 56-member strong community, with 62% of our team strength being female

Strengthening M&E protocols and organizational policy

- To capture the impact of our work in more effective ways and with greater periodicity, we developed and institutionalized new systems to record various quantitative and qualitative metrics
- We initiated a process of quarterly reporting to the organization board, covering pertinent finance and funding information as well as project milestones
- In the past two years, we worked to strengthen our internal governance mechanisms and evolve policy responses for workplace harassment and irregular conduct, and whistleblower protection. This year we added to our organizational policies, a robust child protection and consent procedure that can better protect the rights and vulnerabilities of populations with whom we engage
- We are undertaking an internal impact assessment of our field interventions to tackle gender-based violence. The study will assess outcomes in 25 participating villages to document the program's impact and recommend key strategies for further work

Enabling professional development and team building

- A workshop in November 2021 facilitated by feminist activist and trainer, Vani Periodi, helped the Prakriye team acquire a deeper understanding of how patriarchy impacts women's choices and mobility
- Our education team convened monthly reading seminars on different issues in education and social change, including on aspects such as the role of caste and gender in education in order to build critical perspectives and deepen their multi-disciplinary understanding of education
- We convened trainings around gender sensitization and workplace sexual harassment, in English and Kannada with a view to enhance internal understanding around our organizational Policy on Sexual Harassment (POSH) trainings in English and Kannada for the team over March-April 2022
- Teams working on key research and advocacy projects in feminist digitality, the datafying state, and the digital economy undertook a retreat to connect, learn, and envision new tracks for further work

2021- 2022 VISIBILITY & SOCIAL MEDIA FOOTPRINT

words online education and EdTech. While online education was once seen with doubt, Byju's has reported consistent growth in users and the pandemic has given them a turbo boost. What are the implications of EdTech companies in changing how students learn and grow? What types of partnerships are EdTech companies forging to grow? How can technology be used to bring us closer to the ideal of education as a transformative force for progress, to spark innovation and to address inequity?

These are some of the questions that researcher Gurumurthy Kasinathan will help address. We will be discussing his articles "The Edtech Leviathan" and "Platform Capitalism and Edtech."

Gurumurthy Kasinathan is one of the founders of IT for Change. His areas of expertise include ICT integration in school education, teacher education and pre-service teacher education.

creating a secure cyber world, noted how "the digital space creates virtualised lives that we have no control over," and that "the Bulli Bai case pointed to the paradox that those who perpetrated violations, in this case, are an insignificant part of a larger socio-political fabric in which religious polarisation and hate against Muslims is the ordering principle."

"They are not just the tip of the iceberg, but in some sense, foot soldiers of an ideology that many others, much more powerful than them, construct, endorse, and normalise."

Anita Gurumurthy, Executive Director, IT for Change

The hatred spills over to other platforms too. Handles and trends on Twitter show a ditto menace, where accounts are used to target women of the other community. These accounts, while not causing any evident damage to the order of a Bulli Bai or Sulli Deal, leave the way for such sub-groups to flourish, until they

Testimonials

“ I am extremely proud of our collaboration and alliance with IT for Change in past years. I have closely witnessed their generosity in sharing their profound and extensive knowledge, their feminist style in leading conversations, and inviting diverse voices to these discussions while generating a safe space. They are spearheading the generation of new expertise in fields that are crucial for humanity and the planet, with a critical feminist and decolonial view.

Emilia Reyes

Program Director, Equidad de Genero: Ciudadania, Trabajo y Familia

“ Thank you (to IT for Change) for all their amazing contributions to the UN STI Forum. The Digital Tech thematic session and the innovation exhibit (at the Forum) were the two highlights for me and due credit must go to them for pulling these together. All the speakers in the thematic session were amazing and it was ironically one of the few women-dominated sessions!

Quarraisha Abdool Karim

Co-chair of UN STI Forum

“ IT for Change is highly valued within the digital development space for a reason: not only is their research of the highest quality, but they take it one step forward when it comes to advocacy, training, and actual interventions. They have gone from strength to strength and I will always look up to them for a critical, but constructive perspective.

Savita Bailur

Senior Research Director, Caribou Digital; Adjunct Professor, School of International and Public Affairs, Columbia University

“ Through IT for Change's ICT Integration in Education course, our students learned how to use technology and teach creatively. These classes have greatly helped our students to understand the use of technology in creating interesting teaching materials, as well as to upgrade their digital skills, which is the need of the hour.

Lokesh T.N.

Head, Department of Education, NMKRV College for Women, Bengaluru

“ Most of the issues addressed in the course ‘Facilitating Adolescent Empowerment for Equal Society’ conducted by IT for Change resonate with on-the-ground realities. It is highly useful for those working on eradicating the inequalities faced by adolescent girls.

Chowda Reddy B M

Assistant Teacher, Navodaya Vidyalaya residential high school, Vadipinayakanahalli, Shidlaghatta Taluk, Chikkaballapura District

“ Our partnership with IT for Change has allowed us to successfully conduct our online capacity-building program for teacher-educators of Himachal Pradesh. Our teacher-educators found IT for Change’s online courses on Moodle and Big Blue Button platforms very useful. Their support ensured that they were able to meaningfully use ICTs to make learning easy and interesting.

Manoj K Saxena

Head & Dean (Education), Central University of Himachal Pradesh

“ The past few years stand witness to the promise and peril of digital technologies – their potential for advancing human lives while also standing to exacerbate divides. IT for Change’s work lies at the heart of this paradox. Their work on internet governance, digital rights, decent work, feminist technologies, and gender are but examples of addressing how to capitalize on the possibilities and mitigate the threats of digital transformation towards inclusion. Thank you, IT for Change, for your dynamism and your agility in tackling issues that are of utmost relevance to development in India and the rest of the Global South.

Nagla Rizk

Professor of Economics and Founding Director, Access to Knowledge for Development, The American University in Cairo

“ IT for Change has been a valuable partner in our efforts to secure labor rights and social protection for gig and platform workers in India in the last few years. They have helped us to evaluate the Social Security Code and provide insights on the Motor Vehicle Aggregator guidelines, 2020. They have extended their expertise in assisting us with surveys and reports highlighting the hardships faced by gig and platform workers during Covid-19. We look forward to collaborating with them in our future endeavors.

Shaik Salauddin & Basudev Barman

Indian Federation of App-based Transport Workers (IFAT)

“ IT for Change is one of the best hubs in the world for the production and circulation of knowledge about the digital economy. I highlight their vision from the Global South, which is not understood as something exotic, but as part of the majority worldview. IT for Change is essential inside and outside universities. I am very happy to have found IT for Change on my way.

Rafael Grohmann

Assistant Professor of Media Studies/ Critical Data and Platform Studies, University of Toronto

“ For me, working with IT for Change has always been a learning experience to understand how our economies are restructuring due to digitalization. Not only has IT for Change provided much-needed cutting-edge critiques, but they have been an important ally for our campaigns to promote workers' rights in the digital services supply chain.

Marina Durano

Adviser on Care Economy and Partnership Engagements, UNI Global

“ Over the past decade, Big Tech giants have penetrated the Global South, with disastrous outcomes for socio-economic equality and human rights. Yet, there is hope for a better world, based on popular education and activism. IT for Change is a leading light in the struggle for digital justice. Its reports are uncompromised and incisive, offering a much-needed counter to digital colonialism and capitalism, as well as practical solutions. It has been a pleasure to work with them, and we should all cherish and support their contributions to justice in the digital age.

Michael Kwet

Visiting Fellow, Information Society Project, Yale Law School

“ UNCTAD has worked closely with IT for Change in the past few years, notably in the area of data for development. We very much value IT for Change's research and active involvement in policy discussions bringing innovative thinking from a civil society and development perspective.

Torbjörn Fredriksson

Head of E-commerce and Digital Economy Branch, UNCTAD

Retreat Diaries

With the cautious return to on-site work and in-person activities this year, we worked to create opportunities for building camaraderie among colleagues and recreating our sense of community after an extended period of remote work. You can find [a full list of our colleagues here](#).

In October 2021, the program and education teams took a one-day trip to Guhantara, on the outskirts of Bengaluru for a well-earned day of leisure, and team-building. The education team also convened reading sessions to reflect and rethink on their pedagogic practices through the year and aid planning for the coming year. Articles such as the 'Origins of India's Textbook Culture' by Prof Krishna Kumar, former Director of NCERT, were read and discussed in detail as part of this initiative.

The Research and Advocacy team, scattered across different parts of the country, gathered in Bengaluru in May 2022 for a three day retreat at the Fireflies Intercultural Center. The intense program helped the team undertake a systematic, review, and feedback for the team members working on our flagship research projects. The retreat was also a great space for the team to connect, deepen their rapport and re-establish a common commitment to the organizational goal and vision.

Event Highlights

In the past year, we have been involved in key global policy events, have convened critical roundtables and institutes, and been invited to conferences and webinars to contribute key messages on digital justice in its many forms. Here are some highlights:

Socializing Data Value: How Can Data Governance Meet the Challenge?

11-12 MAY 2021, ONLINE

A core focus of IT for Change's work has been exploring institutional governance frameworks for data that can democratize value creation and distribution. As part of this effort, we hosted a virtual global strategy roundtable, which brought together a select group of leading scholars, scholar-activists, and practitioners. The roundtable, co-organized with Friedrich Ebert Stiftung, explored the contestations characterizing the current economy and its data (dis)order, existing and emerging governance responses, policy visions, and alternative practices that seek to socialize data value.

[Read the report.](#)

NOTABLE ASPECTS

- Brought together leading scholars in the field of data governance to broach a frontier conversation around data value
- Synthesis report from the event featured in Evegny Morozov's Syllabus
- Participants continue to collaborate with us and each other and build on the momentum of the dialogue

IT for Change at the WTO Public Forum 2021

30 SEPTEMBER-2 OCTOBER 2021, GENEVA

At the [World Trade Organization Public Forum](#) 2021, in collaboration with global civil society actors, we convened and participated in two sessions on data flows, e-commerce, and global trade. Our inputs, made by Parminder Jeet Singh at these panels focussed on the data sovereignty of the Global South and how digital trade and data laws can be designed for inclusion and poverty reduction. We also looked at the role of bodies such as the WTO in achieving this goal.

Tune into the [session recording](#).

NOTABLE ASPECTS

- Forwarded a strong southern standpoint on data sovereignty in panel discussions and sessions
- Galvanized global civil society coordination around the forum in partnership with OWINFS

[Read IT for Change's statement.](#)

IT for Change at UN Internet Governance Forum

6-12 DECEMBER 2021, POLAND/ONLINE

At the [Internet Governance Forum](#), a global multistakeholder platform that facilitates the discussion of public policy issues pertaining to the internet, Anita Gurusurthy, denounced the moves by the UN Secretary-General to promote pro-Big Tech multistakeholderist global governance arrangements in the guise of a Global Digital Compact. She took part in the Main Session on Digital Cooperation - Quo Vadis. We have also been furthering this critical perspective on the multistakeholder capture of the digital governance conversation at the UN in the [People's Working Group on Multistakeholderism](#).

NOTABLE ASPECTS

- Pre-event panel discussion convened on Digital Policy Making from Below: Ask the Impacted Sectors First with civil society representatives
- Over eight sessions convened/ participated on issues spanning data justice, fintech, digitalization in health etc.

IT for Change at CESI's 11th Annual International Conference

17-19 DECEMBER 2021, ONLINE

Comparative Education Society of India (CESI), a premier national organization in the area of Education Research, organized its annual national conference in December 2021 on 'Mapping Education during Covid-19'. Gurusurthy Kasinathan, convener of CESI's 'Education and Technology' research interest group was part of the panel discussion and two paper-presentation sessions exploring the intersections of education and tech.

NOTABLE ASPECTS

- A resounding success with delegates from all over India participating in the event
- Panel discussion featured eminent educators including Prof. Rajaram Sharma, NCERT Joint Director (retd); Dr. Anusha Ramanathan, TISS; and Dr. G. Nagarjuna, Homi Baba Science Centre.

[Read the report.](#)

Institute on Feminist Perspectives on Digital Economy and Society

13-14 NOVEMBER 2021, ONLINE

Convened as part of IT for Change's School for Digital Futures, this two-day virtual capacity-building institute for young feminists covered diverse topics such as the platform economy and macroeconomic shifts, and feminist agendas for policy in the digital economy and society. The institute also focused on addressing the critical issue of voice and claims-making in a platformized society.

NOTABLE ASPECTS

- First-of-its-kind learning initiative, providing conceptual and analytical inputs and in-depth capacity building on feminist digitality from a strong southern standpoint
- Institute reached over 75 participants globally from civil society, private sector, and academia
- The first step towards building an enduring community of scholars, practitioners, and activists in the space, providing an impetus for more ambitious pedagogic ventures planned by IT for Change in the coming year
